

Photo#24 Louis Jacobs and Mike Polcyn, from SMU discuss the specimen with Tony Fiorillo.

Photo #25 Wide view of site as work continues on trench.

Photo #26 Roz Morgan came all the way from Arkansas to lend a hand.

Photo #27 Karen trim excess from the block.

Photo #28 A tooth is found.

Photo #29 After some deterioration of the bone is found, the decision is made to prepare a lip around the skull and put on a temporary plaster jacket.

Photo #30 Wide view of site

Photo #31 Toilet paper is applied to separate plaster from the bone.

Photo#32 RJ Taylor helps Ron finish the plaster cap. Unfortunately, several days of rain lifted the cap off and washed it downstream. Only a small amount of damage was done to the bone.

Photo #33 Karen opens the trench further and Ron treats bone with Butvar.

Photo #34 Wide view of progress at site.

Photo #35 Wayne Furstenwerth uses the drill to begin undercutting the block.

Photo #36 Tony takes notes as the crew completes the trench

Photo #37 Undercutting of the block has progressed and separation into two blocks is under way.

Photo #38 A channel is cut to split the block in two.

Photo #39 Richard Zack ponders with Ron on how to finish the split and the undercut.
